

RM10TN-2H

Description:

Mitsubishi Three-Phase Diode Bridge Modules are designed for use in applications requiring rectification of three-phase AC lines into DC voltage. Each module consists of six diodes and the interconnect required to form a complete three-phase bridge circuit. Each diode is electrically insulated from the mounting base plate for easy mounting on a common heatsink with other components.

Features:

- Isolated Mounting
- Metal Base Plate
- Low Thermal Impedance

Applications:

- Motor Control
- Inverters
- UPS
